Drug List Information

We provide this list of the most commonly prescribed medications for declinable conditions to help you when you're completing applications. Not all medications will appear on the drug list for various reasons; however, any decline decision is based on the health questions included in the application. Medications that are not listed may still be considered unacceptable, even if they do not appear on the "unacceptable drugs" list.

- Your applicant may not be aware of a declinable condition listed on their application. Their prescribed medication may indicate a declinable condition exists.
- On the application, please make sure you include the condition along with the medications.

X: Indicates that the medication is unacceptable for a product. If there are no conditions listed next to the medication, the medication is always unacceptable for a product. If there are conditions listed next to the medication, the medication is unacceptable for a product when prescribed for any of the listed conditions.

NOTE: There are duplicate listings of several drugs. For some products, the medication is always unacceptable, and for others it's unacceptable when prescribed for any of the listed conditions.

NOTE: Final Expense has multiple plans available. If a medication is unacceptable for the level plan, make sure you check the other two plans. Your applicant may be eligible for the Graded or Modified benefit plan.

You can always access the latest version of this guide on [aetnaseniorproducts.com](https://www.aetnaseniorproducts.com).
